

SIMATS ENGINEERING

ASSESSMENT TOOL 1- Enumeration Analysis

COURSE CODE: ITA14

COURSE NAME: Ethical Hacking

COURSE OUTCOME COVERED

CO3: *Analyse network services using port scanning, ping sweeps, and enumeration techniques across different operating systems to identify vulnerabilities. (BL3)*

Assessment Tool Weightage: 40%

QUESTIONS: 5

Total Marks:100

1. A cyber security consulting company has been contracted to perform an initial security assessment of the publicly accessible server `scanme.nmap.org`. Before conducting any vulnerability assessment, the client requires a detailed enumeration report. Using Nmap, perform host discovery, TCP port scanning, service version detection, operating system fingerprinting, and default script scanning on `scanme.nmap.org`. Analyze all identified ports and services, determine their business purpose, and evaluate whether they are necessary for public access. Discuss how a threat actor could utilize the information gathered during enumeration to launch further attacks such as service exploitation, brute-force attacks, or vulnerability discovery. Prepare a technical report summarizing your findings, attack surface analysis, risk assessment, and recommendations for securing the server.

Host Discovery

`nmap -sn scanme.nmap.org`

TCP Port Scanning

`nmap -p- scanme.nmap.org`

Service Version Detection

`nmap -sV scanme.nmap.org`

OS Detection

`sudo nmap -O scanme.nmap.org`

Default Script Scanning

`nmap -sC scanme.nmap.org`

Complete Enumeration

`sudo nmap -sS -sV -O -sC -p- scanme.nmap.org`

2. The security team has deployed a deliberately vulnerable Linux server, `192.168.56.101` (Metasploitable 2), in an isolated laboratory environment to train penetration testers. As part of the pre-engagement reconnaissance phase, use Nmap to perform comprehensive enumeration of `192.168.56.101`. Identify all open ports, running services, service versions,

and operating system information. Analyze the purpose of each service and determine which services could provide potential entry points for an attacker. Categorize the discovered services into High, Medium, and Low risk levels based on their exposure and functionality. Explain how the enumeration results could guide a penetration tester in selecting potential attack vectors and exploitation strategies.

Host Discovery

nmap -sn 192.168.56.101

TCP Port Scanning

nmap -p- 192.168.56.101

Service Version Detection

nmap -sV 192.168.56.101

OS Detection

sudo nmap -O 192.168.56.101

Default Script Scanning

nmap -sC 192.168.56.101

Complete Enumeration

sudo nmap -sS -sV -O -sC -p- 192.168.56.101

3. **A financial organization wants to assess the security posture of a Windows workstation located at 192.168.56.102 before connecting it to the production network. Using Nmap, enumerate 192.168.56.102 to identify active ports, network services, file-sharing protocols, remote management services, and operating system details. Analyze whether the discovered services comply with the principle of least privilege and identify any services that may unnecessarily increase the attack surface. Discuss how an attacker could leverage the identified services for reconnaissance, lateral movement, or unauthorized access. Based on your findings, propose a set of security hardening measures to improve the system's resilience against cyberattacks.**

Host Discovery

nmap -sn 192.168.56.102

TCP Port Scanning

nmap -p- 192.168.56.102

Service Version Detection

nmap -sV 192.168.56.102

OS Detection

sudo nmap -O 192.168.56.102

Default Script Scanning

nmap -sC 192.168.56.102

Windows File Sharing and Remote Management Ports

nmap -sV -p 135,139,445,3389,5985,5986 192.168.56.102

Complete Enumeration

sudo nmap -sS -sV -O -sC -p- 192.168.56.102

4. **An organization hosts a web application on 192.168.56.103 (OWASP Juice Shop Server) and plans to conduct a full penetration test. Before the testing phase begins, the security team must understand the server's network exposure. Using Nmap, perform a detailed enumeration of 192.168.56.103, including host discovery, port scanning, service version detection, operating system fingerprinting, and web service identification. Analyze the discovered services and determine how they support the hosted web application. Evaluate the risks associated with exposed web services, administrative interfaces, and supporting services. Explain how the information gathered during enumeration could be used to identify potential vulnerabilities in the web application environment and recommend measures to minimize exposure.**

Host Discovery

```
nmap -sn 192.168.56.103
```

TCP Port Scanning

```
nmap -p- 192.168.56.103
```

Service Version Detection

```
nmap -sV 192.168.56.103
```

Operating System Detection

```
sudo nmap -O 192.168.56.103
```

Default Script Scanning

```
nmap -sC 192.168.56.103
```

Web Service Identification

```
nmap -sV -p 80,443,3000,8000,8080,8443 192.168.56.103
```

HTTP Enumeration

```
nmap --script http-title,http-headers,http-methods -p 80,443,3000,8000,8080,8443 192.168.56.103
```

Complete Enumeration

```
sudo nmap -sS -sV -O -sC -p- 192.168.56.103
```

5. **The network gateway device at 192.168.56.1 serves as the primary access point between the internal laboratory network and external networks. The network administrator suspects that unnecessary management services may be exposed. Using Nmap, conduct a comprehensive enumeration of 192.168.56.1, including port scanning, service detection, operating system fingerprinting, and script-based enumeration. Identify all exposed management interfaces, network services, and accessible resources. Analyze the security implications of exposing services such as SSH, Telnet, SNMP, HTTP, or HTTPS management interfaces. Discuss how attackers could exploit misconfigured management services to gain unauthorized access to the network infrastructure. Based on your analysis, recommend security controls and best practices to secure the gateway device and reduce the risk of compromise.**

Host Discovery

```
nmap -sn 192.168.56.1
```

TCP Port Scanning
nmap -p- 192.168.56.1

Service Version Detection
nmap -sV 192.168.56.1

Operating System Detection
sudo nmap -O 192.168.56.1

Default Script Scanning
nmap -sC 192.168.56.1

Management Service Enumeration
nmap -sV -p 22,23,80,443,161 192.168.56.1

SSH, Telnet, HTTP and HTTPS Enumeration
nmap --script banner,http-title,http-headers -p 22,23,80,443 192.168.56.1

SNMP Service Detection
nmap -sU -p 161 192.168.56.1

Complete TCP Enumeration
sudo nmap -sS -sV -O -sC -p- 192.168.56.1

Code of Conduct:

I _____(Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

RUBRICS FOR CALCULATION

Criteria	Weightage (%)	Level 4 (Exemplary)	Level 3 (Proficient)	Level 2 (Developing)	Level 1 (Beginning)	Mark
Conceptual Understanding	20%	Demonstrates strong understanding of underlying concepts in the simulation	Shows good understanding with minor gaps	Partial understanding; some misconceptions	Lacks understanding of key concepts	
Model Design	25%	Develops accurate, well-structured simulation/model independently	Develops correct model with minor errors	Model is incomplete or requires guidance	Unable to develop a proper model	
Tool Usage	20%	Uses simulation tools effectively with correct setup and execution	Uses tools with minor errors or guidance	Limited ability to use tools properly	Unable to use simulation tools	
Analysis of Results	20%	Provides clear, logical analysis and meaningful interpretation of results	Analysis is reasonable with minor gaps	Superficial analysis; limited interpretation	Unable to analyze or interpret results	
Documentation	15%	Presents results clearly with proper documentation and structured reporting	Documentation is adequate with minor issues	Poorly organized or incomplete documentation	No proper documentation or presentation
